MESSAGE FROM THE MINISTER

It gives me great pleasure to release the current edition of the British Columbia Economic Accounts.

Major changes, both in the original data sources and the economic accounting methods, have required a substantial revision of the Accounts. These changes have resulted in more detailed information on production and consumption in the provincial economy.

My hope is that this enhanced body of statistical information will further serve the needs of those who analyze and forecast economic events in British Columbia. A carefully constructed statistical framework enables the assessment of economic progress and the charting of new directions.

Your comments, suggestions and questions about this publication are welcome, and should be directed to:

BRITISH COLUMBIA ECONOMIC ACCOUNTS

INTRODUCTION

The *B.C. Economic Accounts* present the principal estimates of aggregate economic activity in British Columbia for the period 1961 to 1987. They provide consistent statistical series of key economic indicators such as production, income generation and distribution, capital formation, consumption, and trade flows. In addition, the *Accounts* contain important data on price changes and the relative growth of selected industrial sectors over time. This information facilitates the monitoring of the current economic environment by defining the cyclical pattern of economic growth and identifying ongoing structural changes in the economic base of British Columbia.

The principal source of data for the *B.C. Economic Accounts* is Statistics Canada's *Provincial Economic Accounts*, catalogue 13–213. These provide the annual nominal dollar income and expenditure estimates for British Columbia upon which all of the tables contained herein are based. In preparing the quarterly, the constant dollar, and the Gross Domestic Product by Industry estimates, the Central Statistics Bureau has incorporated the internationally-accepted practices of National Accounting followed by Statistics Canada. Indeed, the Bureau wishes to acknowledge the very significant contribution and assistance of Statistics Canada in making this publication possible.

Structure of the Economic Accounts

The *B.C. Economic Accounts* translate such economic concepts as production, income, capital formation, and savings into a logical system of statistics. Measures of economic activity are grouped together in three basic sets of accounts, according to their particular characteristics. Each of the three sets of accounts separately assesses the value of the province's total production of goods and services, theoretically yielding identical results. The first set, the **Income Accounts**, outlines the distribution of income associated with the province's total economic production and details incomes accruing to individuals and businesses. The second set, the **Expenditure Accounts**, traces the disposition of total output defined in terms of consumption, investment, inventory and net exports undertaken by consumers, businesses, and governments. And finally, the **Industry Accounts** determine the contribution and relative importance of industries in the provincial economy, as measured by Gross Domestic Product at factor cost.

Income Accounts

The Income Accounts focus on the various types of incomes generated in the course of producing the economy's output. Gross Domestic Product at factor cost represents the sum of all incomes earned by the factors of production, namely land, labour and capital. These earnings are classified as returns to labour (wages and salaries, supplementary labour income and military pay), returns to capital (profits, miscellaneous investment income (including interest income) and capital consumption allowances), returns to both labour and capital (unincorporated business income), and the return to land (rent). Transfer payments, such as pensions and family allowance benefits, are not included as income to the factors of production since these payments are not provided in exchange for current productive services.

In addition to the returns to the factors of production, the Income Accounts are adjusted by the non-factor costs of production, (i.e. indirect taxes less subsidies). Briefly, these are costs which are reflected in the market price of goods and services but which are not earned by the factors. The non-factor costs of production are, therefore, added the Gross Domestic Product at factor cost to yield an estimate of Gross Domestic Product at market prices. A description of the components which constitute the Income Accounts are contained in the **Glossary of Terms** at the end of this publication.

Expenditure Accounts

The Expenditure Accounts trace the disposition of final output in the economy by type of "user." In simplified terms, goods and services are "sold" to four groups of users: persons (represented by personal expenditures on goods and services); government (including both government procurement of goods and services and government capital investment); businesses (which undertake residential and nonresidential construction investment, purchases of machinery and equipment, and inventory accumulations); and finally, nonresidents (who purchase a portion of total final output in the form of exports). Given the difficulty of separating imports (non-B.C. output) from each of these expenditure categories, total merchandise imports (international and interprovincial) are calculated separately.

Industry Accounts

The industrial structure of the economy of British Columbia is outlined in the Industry Accounts. The relative importance of each industry is measured in terms of Gross Domestic Product at factor cost, facilitating comparisons of relative growth and changes in industrial mix over time. When analyzing the relative contributions of individual industries to the B.C. economy, other measures such as output and employment levels should be considered along with the GDP data provided in the Industry Accounts.

Revisions to Data and Methodology

In 1985 and 1986, the Income and Expenditure Division of Statistics Canada undertook a major revision of the National Accounts back to 1961. This revision was necessary for three reasons. First, the base year for deflation purposes needed to be shifted from 1971=100 to 1981=100 and this resulted in considerable changes to the real dollar estimates. Secondly, new historical information regarding wages, profits, investment and other inputs had come to light, but could not be incorporated into the Accounts without a systematic revision. And finally, the 1970 Standard Industrial Classification (SIC) needed to be replaced by the 1980 SIC. As these revisions progressed, refinements to what constitutes an industry output were also included (e.g. construction by the mining industry, previously regarded as a mining output, was reclassified as an output of the construction industry).

Upon completion of the National Accounts revisions, Statistics Canada incorporated the changes into the Provincial Accounts methodology, and in July 1987 released revised nominal dollar estimates (income and expenditure) for British Columbia.

In producing quarterly and price-deflated series for B.C., the Central Statistics Bureau revised its procedures to conform with the practices of Statistics Canada. In addition, the revised *B.C. Economic Accounts* have been significantly expanded in order to provide B.C. data on a level comparable to the

Canada-level data produced by Statistics Canada. Specifically, the new information includes:

1) an additional table on quarterly personal income by components, with estimates of the B.C. savings rate;

2) a further disaggregation of personal expenditures and residential construction;

3) a more detailed breakdown of GDP by industry, particularly for the service sector and estimates of business versus non-business production.

Future Revisions

The present edition of the *B.C. Economic Accounts* should be viewed as preliminary. Data revisions by Statistics Canada, receipt of additional statistical information, and continued refinement in the way quarterly and price-deflated series are produced can be expected over the next year.

1) **Wages and Salaries**:

Statistics Canada is implementing a new methodology for calculating wages and salaries by province. Preliminary calculations suggest that an upward revision of B.C. wages and salaries is required and, more importantly, the **growth rate** is expected to be revised downward for 1985 and upward for 1986. Users of the data should, therefore, be aware that the present estimate of real growth in 1986 of -1.1% may be revised upward, perhaps by as much as two percentage points.

2) **Imports and Exports**:

There is a lack of annual information on the level of foreign imports consumed in B.C. (as opposed to passing through B.C. custom ports) and on the level of interprovincial trade. The Input-Output Division of Statistics Canada only estimates these levels by province every five years as part of their ongoing provincial work. The *B.C. Economic Accounts* use these five year benchmark levels (by disaggregated commodity) to interpolate and extrapolate annual estimates. Since the 1984 benchmarks were not available prior to publication, the following tables are based on 1967, 1974 and 1979 benchmark estimates. Incorporation of the 1984 data will result in some changes to the published trade series (including the deflators), but no estimate of the magnitude or direction can be made at this time.

3) **Industry Estimates**:

The Central Statistics Bureau uses “the-sum-of-income-component” method to calculate industry estimates. Although the present estimates and trends are considered as accurate as can be made at this time, Statistics Canada does make minor adjustments to these sums, thereby altering the relative importance of certain industries. Any such adjustments will be included in the next edition of the *B.C. Economic Accounts*.

In response to a number of requests from users of the *B.C. Economic Accounts,* the Central Statistics Bureau is now providing the data (in ASCII format) on floppy disk. There is a nominal charge of $75.00

ADJUSTMENT FOR GRAIN TRANSACTIONS

The Canadian Wheat Board makes payments to producers in the current year on crops delivered in the previous year. Since the Income Account is a measure of the earnings arising out of current production rather than actual cash receipts, adjustments have to be made. A second portion of this adjustment allows for the fact that the earnings of the CWB are calculated on the basis of the change in book values of inventories, whereas the required valuation of inventories for the accounts is the value of physical change. Negative values occur when CWB payments to farmers in a given year are higher than the actual value of grain produced in that year.

BUSINESS INCOME

Defined as the summation of net income of non-farm unincorporated businesses (including rent), net income received by farm operators, corporation profits before taxes, inventory valuation adjustments and capital consumption allowances.

CAPITAL ASSISTANCE

Capital assistance consists of grants by federal and provincial governments to incorporated and unincorporated businesses with the aim of assisting construction of new facilities or the acquisition of new production machinery and equipment.

CAPITAL CONSUMPTION ALLOWANCES

Applicable to both government and business, this item has two components: (i) an allowance for the depreciation or wearing out of fixed capital assets in the economy; and (ii) various valuation adjustments arising from differences in the concepts of income and capital consumption as reflected in business accounting records and as used in the National Accounts.

CORPORATION PROFITS BEFORE TAXES

This component is calculated before payment of dividends and before deduction of income and excess profits taxes, depletion allowances and charitable donations. Due to the complexity of this item, readers desiring a more complete description and derivation of corporate profits are referred to Chapter 7, National Income and Expenditure Accounts, Statistics Canada, 1975, Catalogue No. 13-549E.

CURRENT GOVERNMENT EXPENDITURES ON GOODS AND SERVICES

This component consists of the non-investment expenditures of the federal, provincial and local governments and hospitals. It includes general administrative expenses, such as wages and salaries, as well as outlays for goods and other services required in discharging governmental responsibilities. It also includes the wages and salaries paid to school boards, hospitals, extended care facilities, as well as capital consumption allowances and other miscellaneous expenditures, but does not include any expenditures in the form of capital investment.

CURRENT TRANSFERS

Current transfers are transfers of income between transactors, where the transfers are made from the current income of the payer and added to the current income of the recipient. The main distinction between a transfer payment and the purchase of a good or service is that with a transfer payment, there is no direct link between payment and services received.

i) Current transfers to business from persons

This is the non-productive or transfer portion of interest on consumer debt. It is equal to total interest on consumer debt less administrative charges.

ii) Current transfers to government from persons

Transfers to government includes "Direct Taxes" and "Other Current Transfers to Government". See the relevant headings for further explanation of these terms.

iii) Current transfers to non-residents from persons

This includes personal remittances to non-resident governments, corporations, and persons.

iv) Current transfers to persons from business

Payments classified under this heading refer to: (i) charitable and other contributions from corporations to persons and unincorporated business; and (ii) bad debt allowances, that is, the amounts charged by businesses in respect to doubtful accounts, net of recoveries.

v) Current transfers to persons from government

An expenditure of the federal, provincial and local governments, these transfers encompass all direct payments from governments to persons. Included in this component are such items as family and youth allowances, unemployment insurance benefits, workers' compensation benefits, general welfare payments, old age security benefits, Canada Pension Plan benefits, and public service pension benefits. Excluded are tax refunds or rebates.

vi) Current transfers to persons from nonresidents

This refers to items such as pensions paid by foreign governments, cash payments by relatives or friends living in other countries, and charitable contributions made by non-resident corporations.

DEPRECIATION

Depreciation is the actual wear and tear and obsolescence of fixed capital assets in the process of economic production. It comprises the major part of Capital Consumption Allowances.

DIRECT TAXES

Direct taxes are taxes levied directly on income. They do not include taxes on capital, sales, property or the like. They do include taxes on various forms of income, such as profits, wages, interest and dividends.

i) Business enterprises

This item encompasses three components: general income taxes, mining and logging taxes, and other direct taxes. These taxes are levied on the profits of private and government business enterprises and are collected by federal and provincial governments.

ii) Non-residents

These are taxes levied by the federal government on payments to non-residents of such items as dividends, interest, royalties, management fees, etc.

iii) Persons

This component encompasses such items as personal income taxes, employer and employee contributions to social insurance programmes, employer and employee contributions to non-trusted public service pension plans, and employer and employee contributions to the Canada Pension Plan. Direct taxes assessed against individuals usually take some account of ability to pay and are collected by both federal and provincial governments.

GROSS DOMESTIC EXPENDITURE (GDE)

Gross Domestic Expenditure is a measure of total expenditures within the economy, including imports and exports of goods and services. By definition, GDE is equal to GDP at market prices since total incomes are either consumed, saved (invested) or taxed.

GROSS DOMESTIC PRODUCT (GDP)

This refers to the value of total production (either at factor cost or market prices) within a given geographical area for a specific time period, and is measured in prices which prevail during the period being valued. It includes output that is produced by capital stock shichis owned by non-residents of the region, but it does not include income received by residents on production which takes place outside the region. Thus, GDP is strictly a measure of production within a specific region, regardless of ownership of the factors of production.

i) At Factor Cost

Gross Domestic Product at factor cost is a measure of income accruing to the factors of production (land, labour and capital) including depreciation of capital assets (Capital Consumption Allowances). It does not include incomes that accrue to the non-factor costs of production (i.e. indirect taxes less subsidies). This GDP at factor cost can be derived from GDP at market prices by subtracting indirect taxes less subsidies.

ii) At Market Prices

Gross Domestic Product at market prices is a concept that measures total production based on the earnings of the factors of production (factor costs) plus the non-factor costs of production (indirect taxes less subsidies). Since this is a measure of production, it does not include transfer payments (see Current Transfers).

iii) In Constant Dollars

This is a measure of total production (at factor cost or at market prices) where price changes have been excluded to reveal a measure of physical production. The base year for this deflation process is 1981=100. Note that since the deflator for GDP at factor cost is identical to the deflator for GDP at market prices, the growth in GDP at factor cost is not equal to the growth in GDP at market prices.

GROSS FIXED CAPITAL FORMATION

Government and business gross fixed capital formation is defined as expenditures by government and business for new construction, including alterations and improvements, and transfer costs, and for new machinery and equipment. Expenditures by persons for new residential dwellings are also included, since individuals, in their capacity as home-owners, are treated as business enterprises. Only new construction and new machinery and equipment are included; repairs, purchases of land, used buildings, and second-hand machinery and equipment are excluded since they do not represent current production of goods and services.

GROSS PROVINCIAL PRODUCT (GPP)

As opposed to GDP, this item measures the total value of production attributable to the residents of a given region during a particular time frame, regardless of where that production takes place. Thus GPP at market prices equals GDP at market prices plus investment income recovered from non-residents less investment income paid to non-residents. This concept is not considered in the *B.C. Economic Accounts*.

IMPLICIT PRICE DEFLATORS

These are current-weighted (paasche) price deflators which measure yearly changes in prices as well as changes in expenditure or production patterns between items. The expenditure price deflators are calculated by dividing the current dollar values of the components of Gross Domestic Expenditure by their deflated constant dollar series. The GDP by industry price deflators are likewise calculated by dividing the current dollar values of the industry accounts by their respective deflated constant dollar estimates.

INDIRECT TAXES

These are taxes levied by federal, provincial and local governments, which represent a part of the market price of goods and services but which are not received by factors of production. They may be imposed on the production and/or sale of goods and services or they may be levied in accordance with formulae which take account of certain capital holdings (e.g. real property). They may also take the form of charges for the right to engage in certain activities of a personal, professional, industrial or commercial nature. Indirect taxes include such components as the manufacturers' sales tax (federal), social service taxes (provincial), customs duties, excise duties and taxes (including oil export charges), natural resource taxes, real property taxes, amusement taxes and profits of liquor boards. Indirect taxes are not levied against the sale of oil and gas rights.

INTEREST, DIVIDENDS AND MISCELLANEOUS INVESTMENT INCOME

This category is a measure of the interest income of persons and unincorporated business. It includes bank, mortgage and bond interest, both paid and imputed. It also includes royalties received by persons and interest received on Canadian bond holdings, the investment income of life insurance companies and fraternal organizations, and interest and dividends received from the corporate and government business enterprise sector as well as the non-resident sector of the accounts. It does not include interest on the public debt nor interest on consumer debt.

INTEREST ON THE PUBLIC DEBT

This is an expenditure item for all levels of government and hospitals, consisting of payments made in respect of their borrowed funds.

INVENTORY VALUATION ADJUSTMENT

The inventory valuation adjustment is the difference between the value of physical change in inventory and the change in inventory book value. The adjustment is made from corporation profits and the net income of unincorporated businesses, in order to remove any unrealized gains or losses arising from the effect of price changes on holding of inventories. Since the method of calculating farm income automatically eliminates such gains or losses, this adjustment is required only for business inventories and grain in commercial channels other than the Canadian Wheat Board.

INVESTMENT INCOME (GOVERNMENT)

A revenue source for federal, provincial and local governments and hospitals, investment income includes such items as interest on government-held public funds, interest on loans, advances and other investments, royalties, sale of oil and gas rights and remittances from government enterprises.

LABOUR INCOME

Labour income is defined as the summation of wages and salaries, supplementary labour income, and military pay and allowances.

MERCHANDISE EXPORTS - R.O.C. AND R.O.W.

Merchandise exports to the rest of Canada and to the rest of the world include all receipts from exports of goods (priced at producer prices), excluding transportation, storage and loading costs, and all levied taxes.

MERCHANDISE IMPORTS - R.O.C. AND R.O.W.

Merchandise imports from the rest of Canada and from the rest of the world include all payments for imports of goods (priced at producer prices), excluding transportation, storage and loading costs, and all levied taxes.

MILITARY PAY AND ALLOWANCES

This includes wages and salaries paid to members of the armed forces as well as supplementary payments such as employer contributions to pension funds. The value of uniforms, free medical examinations, food supplied to personnel and provision of living quarters to personnel is not included.

MISCELLANEOUS INVESTMENT INCOME

This component comprises all investment income of persons, unincorporated and incorporated business, and government, excluding dividend payments from corporations. Dividends are implicitly accounted for in the corporate profits before taxes component.

NET DOMESTIC INCOME AT FACTOR COST

This is the sum of the earnings of the factors of production, namely, land, labour and capital excluding capital consumption allowances. It is calculated on a domestic basis since these components are the earnings arising from production within the boundaries of British Columbia.

NET EXPORTS OF SERVICES PLUS STATISTICAL DISCREPANCY

Due to the difficulties encountered in estimating international and interprovincial flows of services, this item is calculated (together with a statistical discrepancy) as the difference between the total GDP at market prices defined in the Income Accounts and the sum of the Expenditure Accounts components.

Since this item includes a statistical discrepancy, it should not be viewed as a reliable estimate of net service exports. However, the general pattern of increasing net exports of services during periods of low or negative growth and decreasing net exports of service during periods of relatively high growth is consistent with economic theory.

NET INCOME OF NON-FARM UNINCORPORATED BUSINESS

This item includes the net income of all non-farm unincorporated businesses covering almost every industry in the economy including the net income of independent professional practitioners, such as doctors, dentists, private nurses, lawyers and engineers. It also includes the rental incomes of persons.

NET INCOME RECEIVED BY FARM OPERATORS

This item comprises cash receipts from the sale of farm products, the imputed value of goods consumed by farm families, supplementary farm payments, and the value of inventory changes (except depreciation on residential dwellings). Negative values occur when the value of the depletion of inventories and operating expenses exceeds cash receipts and supplementary payments. Adjustments for grain transactions are excluded.

OTHER CURRENT TRANSFERS FROM PERSONS TO GOVERNMENT

A revenue item for federal, provincial and local governments, these transfers involve direct remittances from persons to government. Unlike direct taxes, transfer payments are not usually related to the ability to pay. They also involve less compulsion and greater freedom of choice than direct taxes. Included in this component are such items as motor vehicle licenses and permits (personal purposes only), contributions to hospital and medical care insurance, game licenses, marriage licenses, birth and death certificates, and fines and penalties.

PERSONAL DISPOSABLE INCOME

This equals personal income minus direct taxes and other current transfers from persons to government.

PERSONAL INCOME

This is a measure of all income received by persons in British Columbia. It includes: wages, salaries and supplementary labour income; military pay and allowances; net income of non-farm unincorporated business (including rent); net income received by farm operators from farm production (excluding the adjustment on grain transactions); interest, dividends, and miscellaneous investment income; and all transfer payments received by persons.

PERSONAL SAVINGS

Personal savings are primarily determined residually by subtracting total personal consumption from personal disposable income. This residual total is then adjusted to include the value of physical change in farm inventories and the value of personal (non-farm) savings. Personal Savings also include the change in book value of unincorporated business inventories.

PRODUCTION

Production is the creation of goods and services on which members of the community, or the community as a whole, set a dollar value. Any process that creates or adds value to already existing goods is production. For example, the activities of labourers and entrepreneurs who produce and sell the entire range of goods and services; the activities of doctors, lawyers, entertainers, dry cleaners and all who provide services to households and businesses; and the activities of government are all production. In various ways, they create or improve goods and services, and hence add economic value. Also included in production is "income in kind" which refers to such items as the value of food consumed on farms and the imputed value of free lodging provided by employers. While the sale of previously owned assets are excluded, the gain or profit in selling used assets is included. Illegal activities are also excluded from production.

PERSONAL EXPENDITURES ON GOODS AND SERVICES

Personal expenditures on goods and services include all purchases made by persons in British Columbia. Personal expenditure is broken down into the following major categories:

Durable Goods:

This item refers to goods obtained by persons which have an expected long life-time of use and involve a substantial sum of money to purchase. It includes items such as automobiles, recreation equipment and appliances.

Semi-Durable Goods:

These are goods which can be used for a time period of a year or more but do not involve large sums of money to purchase. It includes items such as clothing, footwear, linens and kitchenware.

Non-Durable Goods:

These are goods with an expected life-time of less than one year. They include items such as food and beverages, gasoline, electricity and natural gas.

Services:

This item covers personal expenditure on a broad variety of services ranging from rent paid and imputed on dwellings to transportation, recreation or personal care services.

SUBSIDIES

An expenditure item of federal and provincial governments, subsidies represent payments made by governments to business toward current costs of production, whether this be at the producer or distributor level. Subsidies may be made to agriculture (for example, Canadian Dairy Commission Payments), transportation (such as payments to railways under the National Transportation Act), and communications, among others.

SUPPLEMENTARY LABOUR INCOME

This covers payments made by employers on behalf of employees and can be considered as payment for the services of employees. It includes employers' contributions to unemployment insurance, welfare funds and workers' compensation.

UNDISTRIBUTED CORPORATION PROFITS

Undistributed corporation profits is the residual after deducting corporation income tax, dividends paid to non-residents, dividends paid to Canadian residents and current transfers to persons from corporate profits before taxes.

VALUE ADDED

The value added by an industry is the difference between the gross value of production of that industry less the total value of purchases (including imports) of goods and services from other firms which enter into that industry's production process (i.e. intermediate goods and services). If we sum up the value added for all industries in British Columbia, we would arrive at GDP at factor cost.

VALUE OF PHYSICAL CHANGE IN INVENTORIES

Value of physical change in inventories is defined as the change in the physical volume of non-farm business inventories, valued at the average market prices of the period. It is necessary that the net change in business holdings of inventories during the year be included in the Gross Domestic Product to take into account that portion of current production which has not yet been sold (positive change in inventories), as well as to eliminate that portion of the previous year's production which is included in current sales (negative change in inventories).

WAGES AND SALARIES

This refers to direct payments other than pensions made to employees. It is calculated before deductions are made for contributions to social insurance, taxes and so on. It also includes income in kind, such as free lodging. Retroactive payments are included in the period of payment rather than in the period of earning.
